Fig. 1 | From expression matrix to explorable GRN

Completed case study · 2,000 cells · 19 genes · 13 inference methods

01	INPUT	Expression matrix 2,000 cells × 19 genes	Uploaded pseudotime aligned by cell ID	No reference GRN or benchmark labels
02	PREPROCESS	Validate matrix and cell identities	Detection filter ≥10% (200 of 2,000 cells)	19/19 genes retained log-normalized input
03	INFER	13 methods selected and completed	Full-data edge rankings for each method	Pseudotime supplied to trajectory methods
04	REPEAT	Cell bootstrap within each method	3–7 completed runs per algorithm	Rank concordance and edge recovery
05	INTEGRATE	Compare ranked network evidence	Cross-method support and direction evidence	Activation or repression and confidence
06	INTERPRET	Network view interactions and regulators	Comparison view stability and overlap	Trajectory, perturbation and chart exports

Project 3ac71f2c61bd · no uploaded ground-truth network · benchmark view unavailable
